Note: Scrum reports may be for a week or for multiple weeks ("sprint") based on project deliverable needs.

What we did:
We researched potential topics and upon reaching an agreement on the one for the project, we proceeded to gather data/datasets and additional information.

Following that, for Deliverable 0, we condensed our information into a "Final Proposal" document, which was pushed along with some of the datasets gathered.

Revised proposal following Professor Galletti's comments

What we plan to do:
Gather additional datasets and clean the data down to relevant statistics and metrics.

Update proposal as we continue to refine our ideas (through finding new information and datasets) as well as incorporating Professor Galletti's feedback on our proposal.

Continue to narrow our scope and refine our research statement and purpose.

Challenges:
Refining our thesis/research question into something more narrow and tangible. It's currently too broad.
